### Note:

#### 1. Testing condition:

Stabilizing and leaving the panel only at room temperature for 30 minutes  
The measurement should be executed in a stable, windless, and dark room.

The Optical specifications are measured by Topcon BM-5A with a viewing angle of 2° at a distance of 50cm.

#### 2. Brightness= Nine-point average measurement.

Brightness Min.

Uniformity =  $\frac{\text{Brightness Min.}}{\text{Brightness Max.}}$  X 100%

Brightness Max.

#### 3. Definition of response time: T<sub>R</sub> and T<sub>F</sub>

The figure below is the output signal of the photo detector.

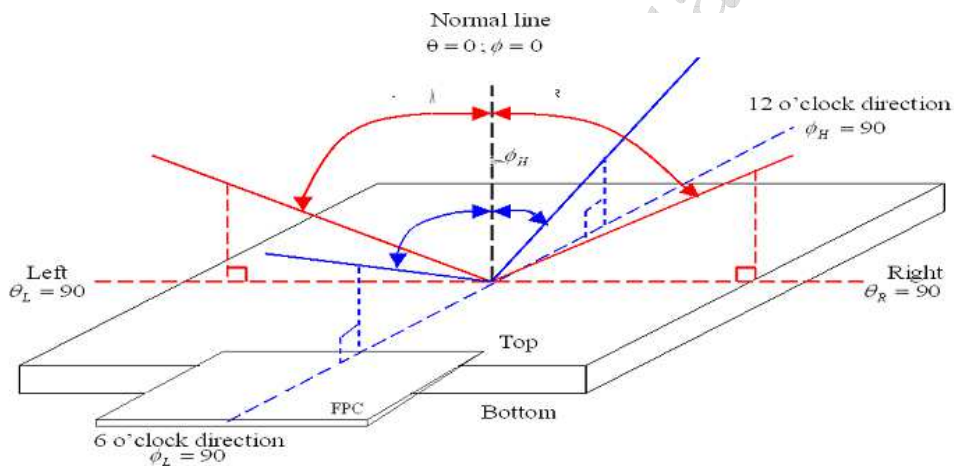

**4. Definition of contrast ratio:**

$$\text{Contrast ratio (CR)} = \frac{\text{Brightness measured when LCD is at "white state"}}{\text{Brightness measured when LCD is at "black state"}}$$

5. Measured at the center area of the panel when all the input terminals of LCD panel are electrically opened.

**Definition of viewing angle:**

		Non-contact:±8KV,150pF/330Ω FPC pin: ±2KV, 150pF/330Ω	

Note 1: The sampling above is individual for each reliability test item.

Note 2: The color fading of polarizing filter should not care.

Note 3: All of the reliability testing chamber above, is using D.I. water.(Min value:1.0 MΩ -cm)

Note 4: In case of malfunction defect caused by ESD damage, if it would be recovered to normal state after resetting, it would be judged as a good part.

Note 5: In the case of cosmetic defect at 85°C/120 hrs test, as long as the module appears to be in the same aspect as before the test when recovering to 70°C, the module would be judged as normal.

## 15. PRECAUTIONS FOR USE

### 15.1. Safety

- (1) Do not swallow any liquid crystal, even if there is no proof that liquid crystal is poisonous.
- (2) If the LCD panel breaks, be careful not to get liquid crystal to touch your skin.
- (3) If skin is exposed to liquid crystal, wash the area thoroughly with alcohol or soap.

### 15.2. Storage Conditions

- (1) Store the panel or module in a dark place where the temperature is  $23\pm 5^{\circ}\text{C}$  and the humidity is below  $50\pm 20\% \text{RH}$ .
- (2) Store in anti-static electricity container.
- (3) Store in clean environment, free from dust, active gas, and solvent.

- (4) Do not place the module near organics solvents or corrosive gases.
- (5) Do not crush, shake, or jolt the module.
- (6) Do not exposed to direct sun light of fluorescent lamps.

### 15.3.Installing LCD Module

Attend to the following items when installing the LCM.

- (1) Cover the surface with a transparent protective plate to protect the polarizer and LC cell.
- (2) When assembling the LCM into other equipment, the spacer to the bit between the LCM and the fitting plate should have enough height to avoid causing stress to the module surface, refer to the individual specifications for measurements. The measurement tolerance should be  $\pm 0.1$ mm.

### 15.4.Precautions For Operation

- (1) Viewing angle varies with the change of liquid crystal driving voltage ( $V_0$ ). Adjust  $V_0$  to show the best contrast.
- (2) Driving the LCD in the voltage above the limit will shorten its lifetime.
- (3) Response time is greatly delayed at temperature below the operating temperature range. However, this does not mean the LCD will be out of the order. It will recover when it returns to the specified temperature range.
- (4) When turning the power on, input each signal after the positive/negative voltage becomes stable.
- (5) Do not apply water or any liquid on product which composed of T/P.

### 15.5.Handling Precautions

- (1) Avoid static electricity which can damage the CMOS LSI; please wear the wrist strap when handling.
- (2) The polarizing plate of the display is very fragile. so, please handle it very carefully.
- (3) Do not give external shock.
- (4) Do not apply excessive force on the surface; it may cause display abnormal .
- (5) Do not wipe the polarizing plate with a dry cloth, as it may easily scratch the surface of plate.
- (6) Do not use ketonics solvent & Aromatic solvent, use with a soft cloth soaked with a cleaning naphtha solvent.
- (7) Do not operate it above the absolute maximum rating.
- (8) Do not remove the panel or frame from the module.
- (9) Do not apply water or any liquid on product, which composed of T/P.

## 15.6.Warranty

- (1) The period is within 12 months since the date of shipping out under normal using and storage conditions.
- (2) The warranty will be avoided in case of defect induced by customer.
