FUSB252 Type-C CC with High Speed Digital (HSD) Port Protection Switch

Features

- Fully Type-C Port Protection
- Supports USB Type-C™ Specification 1.2
- V_{CC} 0 V- 5.5 V
- 20 V DC Protection on V_{CC}
- 16 V DC protection on HSD Port
- V_{DD} Operating Range, 2.7 V- 5.5 V
- Current Capability: 1 A
- CC R_{ON} : 0.3 Ω Typical
- HSD R_{ON} : 5 Ω Typical
- Wide -3 db Bandwidth: 1 GHz
- Low Power Operation: $I_{CC} = 9 \mu A$ Typical
- Dead Battery Support (UFP Support when No Power Applied)
- CC Over-Voltage Protection: Typical = 5.6 V

Description

The FUSB252 is an integrated port protection switch for USB Type-C applications. This product will protect HSD+/- and CCx pins when stressed with voltages up to 20 V. Over-Voltage Protection (OVP) at 5.8 V typical will protect the system for Electrical Overstress (EOS) damage. With a fully integrated USB 2.0 switch for HSD+/-, this product can be easily integrated into existing solutions. The HSD switches can pass USB 2.0 signals with bandwidth 1 GHz to maintain signal integrity and eye compliance.

The CC switches have very low R_{ON} of 0.3 Ω to minimize signal attenuation. The FUSB252 also provides Dead Battery support per the Type-C specification. Additional features include Under-Voltage Lockout (UVLO) and thermal shutdown.

Applications

- Smartphones
- Tablets
- Laptops

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Operation and Application Description

Out of Spec Surge/Spike Voltage due to Hot Plug

The FUSB252 protects end systems against 20 V DC on the CC pin, in cases where the FUSB252 is tested to mimic a hot plug event, a fully charged cable connected to a power supply set to 20 V is used to zap the VICC pins of the device. In these cases, the inductance of the cable causes voltage spikes that are higher than the absolute maximum ratings of the of the VICC pins. These voltages can cause damage to the VOCC pins. This scenario does not occur in normal usage. The Type-C specification prevents the plug from having 20V on VBUS from a PD source prior to a PD contract being completed. When the 20 V potential is on VBUS and shorted to the CC pin, it causes a detach and the voltage spikes are less likely to occur. The following reference circuit is required when the application calls for additional protection to protect against such event as hot plug.

Application Specific Schematic

- Place a 5 V to 6 V rated Zener TVS diode such as (CZRF52C5V6 or CD1005-Z5V1) on the VOCC pin, and a 5 Ω resistor to device ground to prevent the FUSB252 from being damaged during these tests. With this additional protection if is also important to select the right external VICC IEC TVS for the best overall performance.
- Without the additional protection the device by itself can withstand up to 9 V under the same hot plug condition

Figure 6. Reference Schematic

Over-Voltage Protection

When over-voltage event is detected, device will activate OVP to shutdown the switch within t_{OVP} , as well as signal the FLAGB to indicate there is OV event to the system.

Fault Reporting

Upon the detection of an over-voltage event, the INTB/FLAGB signals the fault by activating LOW.

Package Information

UMLP16A Packing Configuration: Figure 1.0

Unit Orientation

Packaging Description:

UMLP16 pins products are classified under Moisture Sensitive Level 1 at 260°C peak package body temperature.

The carrier tape is made from dissipative polystyrene or polycarbonate resin. The cover tape is a multilayer film primarily composed of polyester film, adhesive layer, heat activated sealant, and anti-static sprayed agent. These reeled parts in standard option are shipped with 5000 units per 178 mm diameter reel. Up to three reels are packed in each intermediate box. The reels is made of polystyrene plastic (anti-static coated or intrinsic).

These full reels are individually barcode labeled and placed inside a pizza box made of recyclable corrugated brown paper with a Fairchild logo printing. These pizza boxes are placed inside a barcode labeled shipping box which comes in different sizes depending on the number of parts shipped.
